

## Agenda Report

**Subject: Professional Engineering Proposal: Spruce Street Outlet Study Area Improvements**

Prepared By: Steven M. Saunders, Director of Public Works/Village Engineer

Date: March 1, 2012

Ref: February 16, 2012 Budget Study Session – Stormwater Follow-up

At its February 16, 2012 Budget Study Session, the Village Council reviewed the proposed 5-year Capital Improvement Plan for stormwater projects prepared by staff. That plan represents a strategy for implementing certain stormwater improvements contained in an engineering report prepared by Christopher B. Burke Engineering, Ltd. (CBBEL), which outlined proposed stormwater improvements to provide enhanced flood protection against 25-, 50-, and 100-year storm events for portions of eight drainage areas within the Village. The Capital Improvements Plan identifies two improvements recommended for the Spruce Street Outlet area, consisting of a relief storm sewer from approximately Tower Road and Lincoln Avenue, along Tower Road and Old Green Bay Road, to the storm sewer running through the ravine at Hubbard Place, and also a new storm sewer outlet to Lake Michigan at Lloyd Park. These improvements, shown in Attachment 1, would provide 100-year protection to locations along Tower Road east of the railroad tracks, and along Sheridan Road near Maple Street. Engineering for these two projects is included in the proposed FY 2012-2013 Budget.

At the February 16, 2012 meeting, the Council directed staff to obtain a fee proposal from CBBEL to provide detailed engineering plans, specifications, and estimates needed to obtain contractor bids to construct these projects. CBBEL has provided the attached fee proposal to complete the necessary engineering for constructing these projects.

The following is a brief summary of the scope of work, taken from CBBEL's proposal:

*CBBEL will complete a full topographic survey of the right of way along the project route. CBBEL will also complete a utility survey for an extended area so that the sewer modeling completed in the Flood Reduction Assessment can be enhanced with surveyed sewer sizes and inverts. For each project area, the modeling will be updated with the surveyed information and the proposed sewer improvements will be evaluated in greater detail to determine the required sewer sizes and alignments. Once the proposed sewer criteria are confirmed, CBBEL will develop preliminary engineering plans which will be provided to the Village for review. The new outlet to Lake Michigan will require approval from multiple agencies. CBBEL will begin discussions with the necessary permitting agencies upon initiation of this proposal. When preliminary engineering plans are complete, formal permitting will be initiated. Finally, CBBEL will create final*

*construction plans, an engineer's opinion of construction cost, and bid documents. CBBEL will also assist the Village with the bid process.*

CBBEL proposes to complete their proposed scope of work for a fee not to exceed \$148,572, which would include all engineering services from topographic and utility surveys up to and including evaluation of construction bids and making a contract award recommendation to the Village Council. The fee is based on CBBEL's hourly rates for the proposed scope of work.

At my request CBBEL has provided a fee proposal for engineering to replace the water main on Old Green Bay Road should it be in conflict with the proposed storm sewer routing. This is highly unlikely based on our current level of investigation, and should not be considered part of the base scope of work.

The proposed FY 2012-13 Budget contains \$180,000 for engineering work on these projects. The estimated construction cost, contained in CBBEL's October 2011 study, is \$1,394,000 for the Tower Road Relief Sewer, and \$476,000 for the Lloyd Park Outlet. Construction is proposed for 2013. These costs are considered preliminary at this time, based on conceptual plans and estimates. More detailed cost estimates will be developed as plans and specifications are completed, and after permit review comments are incorporated. It is important to note that actual construction costs will not be known until the projects are actually bid.

**Recommendation:**

Consider awarding a contract to Christopher B. Burke Engineering, Ltd. to provide engineering services for the design of storm sewer improvements for the Spruce Street Outlet Study area identified in the October 2011 CBBEL Flood Risk Reduction Assessment, for a fee not to exceed \$148,572.

Winnetka, IL 60093

Attention: Mr. Steven Saunders  
Director of Public Works / Village Engineer

Subject: Proposal for Professional Engineering Services for  
100-year Protection for the Spruce Street Outlet Study Area

Dear Mr. Saunders:

Christopher B. Burke Engineering, Ltd. (CBBEL) is pleased to submit this proposal to provide professional engineering services for the design of storm sewer improvements for the Spruce Street Outlet Study area identified in the CBBEL 2011 Flood Risk Reduction Assessment (25-, 50-, and 100-year Protection). This proposal includes our Understanding of the Assignment, Scope of Services and Estimated Fee.

### **UNDERSTANDING OF ASSIGNMENT**

CBBEL previously completed the October 2011 Flood Risk Reduction Assessment (25-, 50-, and 100-year Protection) for the Village of Winnetka (Village). That assessment determined the improvements required to provide 25-, 50- or 100-year level of protection in eight study areas. We understand that the Village would like to move forward with the improvements identified for the Spruce Street Outlet study area to provide 100-year level of protection. The projects are generally described as follows:

- Spruce Street Outlet Study Area
  - Tower Road Relief Sewer
    - Additional sewer along Tower Road, Old Green Bay Road to approximately Lincoln Avenue (approximately 800 ft)
    - New sewer along Old Green Bay Road, Tower Road to Hubbard Place (approximately 1,400 ft)
    - High Capacity Inlets on Foxdale Avenue at Tower Road
    - Overflow structure in ravine area
  - Lloyd Park Outlet

- Lloyd Park Outlet
  - New outlet to Lake Michigan at Humboldt Avenue and Sheridan Road (approximately 500 ft)
  - Water quality structure and energy dissipater
  - Pavement re-grading at the intersection of Maple and Pine Streets

We will complete a full topographic survey of the right of way along the project routes. We will also complete a utility survey for an extended area so that the sewer modeling completed in the Flood Reduction Assessment can be enhanced with surveyed sewer sizes and inverts. For each project area, the modeling will be updated with the surveyed information and the proposed sewer improvements will be evaluated in greater detail to determine the required sewer sizes and alignments. Once the proposed sewer criteria are confirmed, we will develop preliminary engineering plans which will be provided to the Village for review. The new outlet to Lake Michigan will require approval from multiple agencies. We will begin discussions with the necessary permitting agencies upon initiation of this proposal. When preliminary engineering plans are complete, formal permitting will be initiated. Finally, we will create final construction plans, an engineer's opinion of probable cost, and bid documents. We will also assist the Village with the bid process.

### **SCOPE OF SERVICES**

Based on our experience with similar projects, our anticipated scope of services is detailed below:

Task 1 – Topographic Survey: The survey will be used as a base map for design purposes. Included are the following survey tasks:

1. Horizontal Control: Utilizing state plane coordinates (NAD '83, Illinois East Zone, 1997 Adjustment); CBBEL will establish recoverable primary control.
2. Vertical Control: Establish site benchmarks for construction purposes, tied to the NAVD 88 Vertical Datum. A level circuit will be run throughout the project, establishing benchmarks and assigning a vertical datum on the horizontal control points.
3. Research at the Cook County Recorder's Office.
4. Field recon and survey to locate existing monumentation and Right-of-way evidence.
5. Analyze Record and Field Data necessary to compute approximate Right-of-Way throughout project limits.
6. Spot elevations and cross sections at 50' (ft) stations for approximately 3,000' (LF) of roadway at Tower Road from Lincoln Avenue to Old Green Bay Road;

Old Green Bay Rd from Tower Road to Hubbard Place; Hubbard Place from Old Green Bay Rd Easterly; the extension from Humboldt Ave through Lloyd Park and at the intersection of Maple Street & Pine Street.

7. All trees of 6 inch caliper or greater to be surveyed. Provide tree size, location and elevation on survey.
8. All above and below ground utilities including, but not limited to: water, sanitary sewer, storm sewer, telephone, electric, cable and gas, etc. Identify size, type, rim, and invert elevations.
9. Existing hardscape improvements located in the project limits including paving, curbs, light fixtures, walks, street signs, parking, fencing and gates, approximate R-O-W, and adjacent building façade & overhangs (if any).
10. Office calculations and plotting of field and record data.
11. Office contouring of field data and one foot contour intervals.
12. Drafting of existing conditions Plan at a scale of 1"=20'.

Task 2 – Utility Coordination: CBBEL will identify utilities that may have facilities within the project limits and send a Preliminary Utility Request to all known utility companies to obtain pertinent information. Based on the information received from the utility companies, CBBEL will include locations of all facilities on the plans, identify potential conflicts with the proposed project and design the proposed improvements to minimize utility conflicts.

Task 3 – Hydraulic Modeling: We will use the sewer size and invert information obtained in Task 1 to enhance the sewer modeling completed in the Flood Reduction Assessment. Incorporating the surveyed sizes and elevations will increase the accuracy of the model and may cause the originally proposed sewer sizes to be modified. In addition, the sewer modeling may have to be altered to avoid utility conflicts. We will review the proposed sewer sizes and alignments for each project area to verify the feasibility of each project and to determine the required sewer sizing criteria.

Task 4 - Geotechnical Engineering/Soil Testing: A geotechnical investigation will be performed by CBBEL's consultant, Testing Service Corporation (TSC). The geotechnical investigation will include five pavement cores/soil borings to determine the existing cross-section of the pavements and underlying soil conditions. The soil will also be tested for potential contaminants. The report will be performed by a soils engineer and reviewed by CBBEL.

Task 5 – Preliminary Engineering: CBBEL will prepare two separate sets of preliminary plans, specifications and cost estimates for the two project areas (Lloyd Park Outfall/Maple Street & Pine Street and Tower Road/Old Green Bay Road). The two project areas will be bid and constructed as two separate contracts.

We estimate the following plan sheets will be required with associated work hours:

<b>SHEET HOURS</b>	<b>No. OF SHEETS</b>	<b>AVG. HOURS PER SHEET</b>	<b>HOURS</b>
Title Sheet	2	3	6
General Notes	2	4	8
Summary of Quantities	2	6	12
Alignment Ties & Benchmarks	2	12	24
Typical Sections	2	16	32
Existing/Proposed Plan & Profile (3 panel-20' scale)	9	24	216
Proposed Water Main on Old Green Bay Rd from Tower Road to Hubbard Place (include on Existing/Proposed Plan & Profile sheets above)	-	-	40
Traffic Control & Protection (Typ Sects & Notes)	1	16	16
Junction Chambers	2	32	64
Construction Details	2	12	24
Water Quality Structure	1	32	32
Specifications	-	-	40
Cost Estimates/Quantity Calculations	-	-	80
QA/QC Reviews	-	-	24
<b>Total</b>	<b>25</b>		<b>618*</b>

\* Represents hours to complete Tasks 5 and 7.

Preliminary Plans, Specifications and a Cost Estimate will be submitted to the Village for review. This task includes one review meeting with Village Staff.

Task 6 – Permitting: The proposed improvements associated with the new outlet to Lake Michigan at Lloyd Park and the Tower Road improvements will require approval from multiple agencies. Due to the numerous approvals required for this work, we will begin the permitting process following the execution of this proposal utilizing a concept level plan. We have budgeted for pre-application meetings with each of the required agencies. This task will consist of the necessary field work, coordination, preparation of the required submittals and forms for multiple applications to the following agencies:

- United States Army Corps of Engineers (USACE) – assumes a Regional Permit
  - North Cook County Soil and Water Conservation District (NCSWCD)
  - United States Fish and Wildlife Service (USFWS)
- Illinois Environmental Protection Agency (IEPA)
  - Section 401 Water Quality Certification and Anti-Degradation
  - National Pollutant Discharge Elimination System (NPDES)
- Metropolitan Water Reclamation District of Greater Chicago (MWRDGC)
- Illinois Department of Natural Resources (IDNR)
- Illinois Department of Transportation (IDOT)
- Winnetka Park District Coordination

*USACE* – The new outlet to Lake Michigan will require an energy dissipation structure to prevent erosion of the beach area associated with the new outlet. This work will occur within the ordinary high water level associated with Lake Michigan. An investigation of the project site will be completed to determine the limits of wetlands present. The wetland delineation will be completed based on the methodology established by the USACE. Also during the site visit, wildlife and plant community qualities will be assessed. The limits of the wetland community will be field staked so that they can be located in relation to the project coordinate system. The results of the field reconnaissance will be summarized in a letter report. The wetlands' general quality, according to Swink and Wilhelm Methodology (1994), will be included along with exhibits depicting the approximate wetland and project boundaries, National Wetland Inventory, Soil Survey, floodplain, USGS topography, and the U.S. Army Corps of Engineers' Routine On-Site Data Forms. The delineation will be field surveyed and incorporated into our base mapping. The required exhibits, specifications data and project information will be compiled and assembled in a permit application package to the USACE under the Regional Permit Program. Supporting calculations, specifications and details for the energy dissipation structure will be included as part of the USACE submittal.

CBBEL will submit a request for threatened and endangered species consultation with the IDNR and complete U.S. Fish and Wildlife Service (USFWS) project documentation. CBBEL will prepare and submit the necessary documents to obtain approval from the NCSWCD. Project documentation from both of these agencies is required to obtain approval from the USACE for the new outlet to Lake Michigan.

*IEPA* – The proposed project includes a water quality structure to meet the water quality standards required by the IEPA. CBBEL staff will prepare and submit the required documentation to the IEPA for an application for Section 401 Water Quality Certification and Anti-degradation. CBBEL staff will prepare and submit the required documentation to the IEPA to amend the Village's NPDES permit to include the new outfall to Lake Michigan. The IEPA review process is subservient to the USACE review process and will occur simultaneously.

*MWRDGC* – CBBEL will prepare the required exhibits, specifications data, supporting calculations, hydraulic modeling and project information for compilation into a permit application package to the MWRDGC.

*IDNR* – Lake Michigan is defined by IDNR as a Public Body of Water or Public Waters. CBBEL will prepare the required application package to the IDNR for the work associated with the new outlet to Lake Michigan and the energy dissipation structure.

*IDOT* – The new outlet to Lake Michigan will require a storm sewer connection within the Sheridan Road right-of-way which is under IDOT's jurisdiction. CBBEL will prepare a letter report requesting approval from IDOT for work within the right-of-way.

*Park District Coordination* – The new outlet to Lake Michigan will be located on Park District property. CBBEL will coordinate the proposed alignment of the new outlet with the Park District and prepare a letter report for submittal to the Park District.

We will coordinate development of documents with the Village and other project team members. The required exhibits, specifications data and project information will be

compiled and assembled in a permit application packages to each agency listed above. During the permit review process, follow-up information, submittals, and documentation are anticipated. We expect that meetings with the Village, other stakeholders and regulatory agencies will occur to finalize required information, submittals and documentation. Permit application fees to each of the agencies have not been included in our fee.

Task 7 – Final Engineering: Upon meeting with the Village staff to review their comments on the preliminary submittal, CBBEL will revise and finalize the contract documents and cost estimates. During this task the exact letting dates will be determined and estimated construction schedules will be provided.

Task 7A – Preliminary and Final Engineering – Water Main Replacement: As requested, we have included the work effort that would be required to complete the design for the replacement of the existing water main on Old Green Bay Road between Tower Road and Hubbard Place. The man hours for this work have been added to the table above. This work includes all special provisions, standards, quantity calculations and plans.

Task 8 – Bid Assistance: CBBEL will assist the Village in advertising for bids, distribute plans and specifications to all bidders, and be present at the bid openings. CBBEL will review and tabulate all of the bids and make recommendations of award.

**FEE**

The costs of the services provided are as follows and will not be exceeded without prior approval:

<b>TASK</b>	<b>DESCRIPTION</b>	<b>COST</b>
1	Topographic Survey	\$19,976
2	Utility Coordination	\$2,692
3	Hydraulic Modeling	\$8,798
4	Geotechnical Engineering/Soil Testing	\$4,300
5	Preliminary Engineering	\$46,478
6	Permitting	\$30,264
7	Final Engineering	\$30,470
8	Bid Assistance	\$2,094
	Direct Costs	\$3,500
	<b>Total:</b>	<b>\$148,572</b>
7A	Preliminary and Final Engineering – Water Main Replacement	\$4,898
	<b>Total with Water Main Replacement:</b>	<b>\$153,470</b>

We will bill you at the hourly rates specified on the attached Schedule of Charges and establish our contract in accordance with the attached General Terms and Conditions. The General Terms and Conditions are expressly incorporated into and are an integral part of this contract for professional services.

Please sign and return one copy of this agreement as an indication of acceptance and notice to proceed. Please feel free to contact us anytime.

Sincerely,

 for

Christopher B. Burke, PhD, PE, D.WRE, F.ASCE  
President

CHRISTOPHER B. BURKE ENGINEERING, LTD.  
GENERAL TERMS AND CONDITIONS

1. Relationship Between Engineer and Client: Christopher B. Burke Engineering, Ltd. (Engineer) shall serve as Client's professional engineer consultant in those phases of the Project to which this Agreement applies. This relationship is that of a buyer and seller of professional services and as such the Engineer is an independent contractor in the performance of this Agreement and it is understood that the parties have not entered into any joint venture or partnership with the other. The Engineer shall not be considered to be the agent of the Client. Nothing contained in this Agreement shall create a contractual relationship with a cause of action in favor of a third party against either the Client or Engineer.

Furthermore, causes of action between the parties to this Agreement pertaining to acts of failures to act shall be deemed to have accrued and the applicable statute of limitations shall commence to run not later than the date of substantial completion.

2. Responsibility of the Engineer: Engineer will strive to perform services under this Agreement in accordance with generally accepted and currently recognized engineering practices and principles, and in a manner consistent with that level of care and skill ordinarily exercised by members of the profession currently practicing in the same locality under similar conditions. No other representation, express or implied, and no warranty or guarantee is included or intended in this Agreement, or in any report, opinion, document, or otherwise.

Notwithstanding anything to the contrary which may be contained in this Agreement or any other material incorporated herein by reference, or in any Agreement between the Client and any other party concerning the Project, the Engineer shall not have control or be in charge of and shall not be responsible for the means, methods, techniques, sequences or procedures of construction, or the safety, safety precautions or programs of the Client, the construction contractor, other contractors or subcontractors performing any of the work or providing any of the services on the Project. Nor shall the Engineer be responsible for the acts or omissions of the Client, or for the failure of the Client, any architect, engineer, consultant, contractor or subcontractor to carry out their respective responsibilities in accordance with the Project documents, this Agreement or any other agreement concerning the Project. Any provision which purports to amend this provision shall be without effect unless it contains a reference that the content of this condition is expressly amended for the purposes described in such amendment and is signed by the Engineer.

3. Changes: Client reserves the right by written change order or amendment to make changes in requirements, amount of work, or engineering time schedule adjustments, and Engineer and Client shall negotiate appropriate adjustments acceptable to both parties to accommodate any changes, if commercially possible.
4. Suspension of Services: Client may, at any time, by written order to Engineer (Suspension of Services Order) require Engineer to stop all, or any part, of the services required by this Agreement. Upon receipt of such an order, Engineer shall immediately comply with its terms and take all reasonable steps to minimize the costs associated with the services affected by such order. Client, however, shall pay all costs incurred by the suspension, including all costs necessary to maintain continuity and for the resumption

of the services upon expiration of the Suspension of Services Order. Engineer will not be obligated to provide the same personnel employed prior to suspension, when the services are resumed, in the event that the period of suspension is greater than thirty (30) days.

5. Termination: This Agreement may be terminated by either party upon thirty (30) days written notice in the event of substantial failure by the other party to perform in accordance with the terms hereof through no fault of the terminating party. This Agreement may be terminated by Client, under the same terms, whenever Client shall determine that termination is in its best interests. Cost of termination, including salaries, overhead and fee, incurred by Engineer either before or after the termination date shall be reimbursed by Client.
6. Documents Delivered to Client: Drawings, specifications, reports, and any other Project Documents prepared by Engineer in connection with any or all of the services furnished hereunder shall be delivered to the Client for the use of the Client. Engineer shall have the right to retain originals of all Project Documents and drawings for its files. Furthermore, it is understood and agreed that the Project Documents such as, but not limited to reports, calculations, drawings, and specifications prepared for the Project, whether in hard copy or machine readable form, are instruments of professional service intended for one-time use in the construction of this Project. These Project Documents are and shall remain the property of the Engineer. The Client may retain copies, including copies stored on magnetic tape or disk, for information and reference in connection with the occupancy and use of the Project.

When and if record drawings are to be provided by the Engineer, Client understands that information used in the preparation of record drawings is provided by others and Engineer is not responsible for accuracy, completeness, nor sufficiency of such information. Client also understands that the level of detail illustrated by record drawings will generally be the same as the level of detail illustrated by the design drawing used for project construction. If additional detail is requested by the Client to be included on the record drawings, then the Client understands and agrees that the Engineer will be due additional compensation for additional services.

It is also understood and agreed that because of the possibility that information and data delivered in machine readable form may be altered, whether inadvertently or otherwise, the Engineer reserves the right to retain the original tapes/disks and to remove from copies provided to the Client all identification reflecting the involvement of the Engineer in their preparation. The Engineer also reserves the right to retain hard copy originals of all Project Documentation delivered to the Client in machine readable form, which originals shall be referred to and shall govern in the event of any inconsistency between the two.

The Client understands that the automated conversion of information and data from the system and format used by the Engineer to an alternate system or format cannot be accomplished without the introduction of inexactitudes, anomalies, and errors. In the event Project Documentation provided to the Client in machine readable form is so converted, the Client agrees to assume all risks associated therewith and, to the fullest

extent permitted by law, to hold harmless and indemnify the Engineer from and against all claims, liabilities, losses, damages, and costs, including but not limited to attorney's fees, arising therefrom or in connection therewith.

The Client recognizes that changes or modifications to the Engineer's instruments of professional service introduced by anyone other than the Engineer may result in adverse consequences which the Engineer can neither predict nor control. Therefore, and in consideration of the Engineer's agreement to deliver its instruments of professional service in machine readable form, the Client agrees, to the fullest extent permitted by law, to hold harmless and indemnify the Engineer from and against all claims, liabilities, losses, damages, and costs, including but not limited to attorney's fees, arising out of or in any way connected with the modification, misinterpretation, misuse, or reuse by others of the machine readable information and data provided by the Engineer under this Agreement. The foregoing indemnification applies, without limitation, to any use of the Project Documentation on other projects, for additions to this Project, or for completion of this Project by others, excepting only such use as may be authorized, in writing, by the Engineer.

7. Reuse of Documents: All Project Documents including but not limited to reports, opinions of probable costs, drawings and specifications furnished by Engineer pursuant to this Agreement are intended for use on the Project only. They cannot be used by Client or others on extensions of the Project or any other project. Any reuse, without specific written verification or adaptation by Engineer, shall be at Client's sole risk, and Client shall indemnify and hold harmless Engineer from all claims, damages, losses, and expenses including attorney's fees arising out of or resulting therefrom.

The Engineer shall have the right to include representations of the design of the Project, including photographs of the exterior and interior, among the Engineer's promotional and professional materials. The Engineer's materials shall not include the Client's confidential and proprietary information if the Client has previously advised the Engineer in writing of the specific information considered by the Client to be confidential and proprietary.

8. Standard of Practice: The Engineer will strive to conduct services under this agreement in a manner consistent with that level of care and skill ordinarily exercised by members of the profession currently practicing in the same locality under similar conditions as of the date of this Agreement.

9. Compliance With Laws: The Engineer will strive to exercise usual and customary professional care in his/her efforts to comply with those laws, codes, ordinance and regulations which are in effect as of the date of this Agreement.

With specific respect to prescribed requirements of the Americans with Disabilities Act of 1990 or certified state or local accessibility regulations (ADA), Client understands ADA is a civil rights legislation and that interpretation of ADA is a legal issue and not a design issue and, accordingly, retention of legal counsel (by Client) for purposes of interpretation is advisable. As such and with respect to ADA, Client agrees to waive any action against Engineer, and to indemnify and defend Engineer against any claim arising from Engineer's alleged failure to meet ADA requirements prescribed.

Further to the law and code compliance, the Client understands that the Engineer will strive to provide designs in accordance with the prevailing Standards of Practice as previously set forth, but that the Engineer does not warrant that any reviewing agency having jurisdiction will not for its own purposes comment, request changes and/or additions to such designs. In the event such design requests are made by a reviewing agency, but which do not exist in the form of a written regulation, ordinance or other similar document as published by the reviewing agency, then such design changes (at substantial variance from the intended design developed by the Engineer), if effected and incorporated into the project documents by the Engineer, shall be considered as Supplementary Task(s) to the Engineer's Scope of Service and compensated for accordingly.

10. Indemnification: Engineer shall indemnify and hold harmless Client up to the amount of this contract fee (for services) from loss or expense, including reasonable attorney's fees for claims for personal injury (including death) or property damage to the extent caused by the sole negligent act, error or omission of Engineer.

Client shall indemnify and hold harmless Engineer under this Agreement, from loss or expense, including reasonable attorney's fees, for claims for personal injuries (including death) or property damage arising out of the sole negligent act, error omission of Client.

In the event of joint or concurrent negligence of Engineer and Client, each shall bear that portion of the loss or expense that its share of the joint or concurrent negligence bears to the total negligence (including that of third parties), which caused the personal injury or property damage.

Engineer shall not be liable for special, incidental or consequential damages, including, but not limited to loss of profits, revenue, use of capital, claims of customers, cost of purchased or replacement power, or for any other loss of any nature, whether based on contract, tort, negligence, strict liability or otherwise, by reasons of the services rendered under this Agreement.

11. Opinions of Probable Cost: Since Engineer has no control over the cost of labor, materials or equipment, or over the Contractor(s) method of determining process, or over competitive bidding or market conditions, his/her opinions of probable Project Construction Cost provided for herein are to be made on the basis of his/her experience and qualifications and represent his/her judgement as a design professional familiar with the construction industry, but Engineer cannot and does not guarantee that proposal, bids or the Construction Cost will not vary from opinions of probable construction cost prepared by him/her. If prior to the Bidding or Negotiating Phase, Client wishes greater accuracy as to the Construction Cost, the Client shall employ an independent cost estimator Consultant for the purpose of obtaining a second construction cost opinion independent from Engineer.

12. Governing Law & Dispute Resolutions: This Agreement shall be governed by and construed in accordance with Articles previously set forth by (Item 9 of) this Agreement, together with the laws of the **State of Illinois**.

Any claim, dispute or other matter in question arising out of or related to this Agreement, which can not be mutually resolved by the parties of this Agreement, shall be subject to mediation as a condition precedent to arbitration (if arbitration is agreed upon by the parties of this Agreement) or the institution of legal or equitable proceedings by either party. If such matter relates to or is the subject of a lien arising out of the Engineer's services, the Engineer may proceed in accordance with applicable law to comply with the lien notice or filing deadlines prior to resolution of the matter by mediation or by arbitration.

The Client and Engineer shall endeavor to resolve claims, disputes and other matters in question between them by mediation which, unless the parties mutually agree otherwise, shall be in accordance with the Construction Industry Mediation Rules of the American Arbitration Association currently in effect. Requests for mediation shall be filed in writing with the other party to this Agreement and with the American Arbitration Association. The request may be made concurrently with the filing of a demand for arbitration but, in such event, mediation shall proceed in advance of arbitration or legal or equitable proceedings, which shall be stayed pending mediation for a period of 60 days from the date of filing, unless stayed for a longer period by agreement of the parties or court order.

The parties shall share the mediator's fee and any filing fees equally. The mediation shall be held in the place where the Project is located, unless another location is mutually agreed upon. Agreements reached in mediation shall be enforceable as settlement agreements in any court having jurisdiction thereof.

13. Successors and Assigns: The terms of this Agreement shall be binding upon and inure to the benefit of the parties and their respective successors and assigns: provided, however, that neither party shall assign this Agreement in whole or in part without the prior written approval of the other.
14. Waiver of Contract Breach: The waiver of one party of any breach of this Agreement or the failure of one party to enforce at any time, or for any period of time, any of the provisions hereof, shall be limited to the particular instance, shall not operate or be deemed to waive any future breaches of this Agreement and shall not be construed to be a waiver of any provision, except for the particular instance.
15. Entire Understanding of Agreement: This Agreement represents and incorporates the entire understanding of the parties hereto, and each party acknowledges that there are no warranties, representations, covenants or understandings of any kind, matter or description whatsoever, made by either party to the other except as expressly set forth herein. Client and the Engineer hereby agree that any purchase orders, invoices, confirmations, acknowledgments or other similar documents executed or delivered with respect to the subject matter hereof that conflict with the terms of the Agreement shall be null, void and without effect to the extent they conflict with the terms of this Agreement.
16. Amendment: This Agreement shall not be subject to amendment unless another instrument is duly executed by duly authorized representatives of each of the parties and entitled "Amendment of Agreement".

17. Severability of Invalid Provisions: If any provision of the Agreement shall be held to contravene or to be invalid under the laws of any particular state, county or jurisdiction where used, such contravention shall not invalidate the entire Agreement, but it shall be construed as if not containing the particular provisions held to be invalid in the particular state, country or jurisdiction and the rights or obligations of the parties hereto shall be construed and enforced accordingly.
18. Force Majeure: Neither Client nor Engineer shall be liable for any fault or delay caused by any contingency beyond their control including but not limited to acts of God, wars, strikes, walkouts, fires, natural calamities, or demands or requirements of governmental agencies.
19. Subcontracts: Engineer may subcontract portions of the work, but each subcontractor must be approved by Client in writing.
20. Access and Permits: Client shall arrange for Engineer to enter upon public and private property and obtain all necessary approvals and permits required from all governmental authorities having jurisdiction over the Project. Client shall pay costs (including Engineer's employee salaries, overhead and fee) incident to any effort by Engineer toward assisting Client in such access, permits or approvals, if Engineer perform such services.
21. Designation of Authorized Representative: Each party (to this Agreement) shall designate one or more persons to act with authority in its behalf in respect to appropriate aspects of the Project. The persons designated shall review and respond promptly to all communications received from the other party.
22. Notices: Any notice or designation required to be given to either party hereto shall be in writing, and unless receipt of such notice is expressly required by the terms hereof shall be deemed to be effectively served when deposited in the mail with sufficient first class postage affixed, and addressed to the party to whom such notice is directed at such party's place of business or such other address as either party shall hereafter furnish to the other party by written notice as herein provided.
23. Limit of Liability: The Client and the Engineer have discussed the risks, rewards, and benefits of the project and the Engineer's total fee for services. In recognition of the relative risks and benefits of the Project to both the Client and the Engineer, the risks have been allocated such that the Client agrees that to the fullest extent permitted by law, the Engineer's total aggregate liability to the Client for any and all injuries, claims, costs, losses, expenses, damages of any nature whatsoever or claim expenses arising out of this Agreement from any cause or causes, including attorney's fees and costs, and expert witness fees and costs, shall not exceed the total Engineer's fee for professional engineering services rendered on this project as made part of this Agreement. Such causes included but are not limited to the Engineer's negligence, errors, omissions, strict liability or breach of contract. It is intended that this limitation apply to any and all liability or cause of action however alleged or arising, unless otherwise prohibited by law.

24. Client's Responsibilities: The Client agrees to provide full information regarding requirements for and about the Project, including a program which shall set forth the Client's objectives, schedule, constraints, criteria, special equipment, systems and site requirements.

The Client agrees to furnish and pay for all legal, accounting and insurance counseling services as may be necessary at any time for the Project, including auditing services which the Client may require to verify the Contractor's Application for Payment or to ascertain how or for what purpose the Contractor has used the money paid by or on behalf of the Client.

The Client agrees to require the Contractor, to the fullest extent permitted by law, to indemnify, hold harmless, and defend the Engineer, its consultants, and the employees and agents of any of them from and against any and all claims, suits, demands, liabilities, losses, damages, and costs ("Losses"), including but not limited to costs of defense, arising in whole or in part out of the negligence of the Contractor, its subcontractors, the officers, employees, agents, and subcontractors of any of them, or anyone for whose acts any of them may be liable, regardless of whether or not such Losses are caused in part by a party indemnified hereunder. Specifically excluded from the foregoing are Losses arising out of the preparation or approval of maps, drawings, opinions, reports, surveys, change orders, designs, or specifications, and the giving of or failure to give directions by the Engineer, its consultants, and the agents and employees of any of them, provided such giving or failure to give is the primary cause of Loss. The Client also agrees to require the Contractor to provide to the Engineer the required certificate of insurance.

The Client further agrees to require the Contractor to name the Engineer, its agents and consultants on the Contractor's policy or policies of comprehensive or commercial general liability insurance. Such insurance shall include products and completed operations and contractual liability coverages, shall be primary and noncontributing with any insurance maintained by the Engineer or its agents and consultants, and shall provide that the Engineer be given thirty days, unqualified written notice prior to any cancellation thereof.

In the event the foregoing requirements, or any of them, are not established by the Client and met by the Contractor, the Client agrees to indemnify and hold harmless the Engineer, its employees, agents, and consultants from and against any and all Losses which would have been indemnified and insured against by the Contractor, but were not.

When Contract Documents prepared under the Scope of Services of this contract require insurance(s) to be provided, obtained and/or otherwise maintained by the Contractor, the Client agrees to be wholly responsible for setting forth any and all such insurance requirements. Furthermore, any document provided for Client review by the Engineer under this Contract related to such insurance(s) shall be considered as sample insurance requirements and not the recommendation of the Engineer. Client agrees to have their own risk management department review any and all insurance requirements for adequacy and to determine specific types of insurance(s) required for the project. Client further agrees that decisions concerning types and amounts of insurance are

specific to the project and shall be the product of the Client. As such, any and all insurance requirements made part of Contract Documents prepared by the Engineer are not to be considered the Engineer's recommendation, and the Client shall make the final decision regarding insurance requirements.

25. Information Provided by Others: The Engineer shall indicate to the Client the information needed for rendering of the services of this Agreement. The Client shall provide to the Engineer such information as is available to the Client and the Client's consultants and contractors, and the Engineer shall be entitled to rely upon the accuracy and completeness thereof. The Client recognizes that it is impossible for the Engineer to assure the accuracy, completeness and sufficiency of such information, either because it is impossible to verify, or because of errors or omissions which may have occurred in assembling the information the Client is providing. Accordingly, the Client agrees, to the fullest extent permitted by law, to indemnify and hold the Engineer and the Engineer's subconsultants harmless from any claim, liability or cost (including reasonable attorneys' fees and cost of defense) for injury or loss arising or allegedly arising from errors, omissions or inaccuracies in documents or other information provided by the Client to the Engineer.

26. Payment: Client shall be invoiced once each month for work performed during the preceding period. Client agrees to pay each invoice within thirty (30) days of its receipt. The client further agrees to pay interest on all amounts invoiced and not paid or objected to for valid cause within said thirty (30) day period at the rate of eighteen (18) percent per annum (or the maximum interest rate permitted under applicable law, whichever is the lesser) until paid. Client further agrees to pay Engineer's cost of collection of all amounts due and unpaid after sixty (60) days, including court costs and reasonable attorney's fees, as well as costs attributed to suspension of services accordingly and as follows:

Collection Costs. In the event legal action is necessary to enforce the payment provisions of this Agreement, the Engineer shall be entitled to collect from the Client any judgement or settlement sums due, reasonable attorneys' fees, court costs and expenses incurred by the Engineer in connection therewith and, in addition, the reasonable value of the Engineer's time and expenses spent in connection with such collection action, computed at the Engineer's prevailing fee schedule and expense policies.

Suspension of Services. If the Client fails to make payments when due or otherwise is in breach of this Agreement, the Engineer may suspend performance of services upon five (5) calendar days' notice to the Client. The Engineer shall have no liability whatsoever to the Client for any costs or damages as a result of such suspension caused by any breach of this Agreement by the Client. Client will reimburse Engineer for all associated costs as previously set forth in (Item 4 of) this Agreement.

27. When construction observation tasks are part of the service to be performed by the Engineer under this Agreement, the Client will include the following clause in the construction contract documents and Client agrees not to modify or delete it:

Kotecki Waiver. Contractor (and any subcontractor into whose subcontract this clause is incorporated) agrees to assume the entire liability for all personal injury claims suffered by its own employees, including without limitation claims under the **Illinois** Structural Work Act, asserted by persons allegedly injured on the Project; waives any limitation of liability defense based upon the Worker's Compensation Act, court interpretations of said Act or otherwise; and to the fullest extent permitted by law, agrees to indemnify and hold harmless and defend Owner and Engineer and their agents, employees and consultants (the "Indemnitees") from and against all such loss, expense, damage or injury, including reasonable attorneys' fees, that the Indemnitees may sustain as a result of such claims, except to the extent that **Illinois** law prohibits indemnity for the Indemnitees' own negligence. The Owner and Engineer are designated and recognized as explicit third party beneficiaries of the Kotecki Waiver within the general contract and all subcontracts entered into in furtherance of the general contract.

28. Job Site Safety/Supervision & Construction Observation: The Engineer shall neither have control over or charge of, nor be responsible for, the construction means, methods, techniques, sequences of procedures, or for safety precautions and programs in connection with the Work since they are solely the Contractor's rights and responsibilities. The Client agrees that the Contractor shall supervise and direct the work efficiently with his/her best skill and attention; and that the Contractor shall be solely responsible for the means, methods, techniques, sequences and procedures of construction and safety at the job site. The Client agrees and warrants that this intent shall be carried out in the Client's contract with the Contractor. The Client further agrees that the Contractor shall be responsible for initiating, maintaining and supervising all safety precautions and programs in connection with the work; and that the Contractor shall take all necessary precautions for the safety of, and shall provide the necessary protection to prevent damage, injury or loss to all employees on the subject site and all other persons who may be affected thereby. The Engineer shall have no authority to stop the work of the Contractor or the work of any subcontractor on the project.

When construction observation services are included in the Scope of Services, the Engineer shall visit the site at intervals appropriate to the stage of the Contractor's operation, or as otherwise agreed to by the Client and the Engineer to: 1) become generally familiar with and to keep the Client informed about the progress and quality of the Work; 2) to strive to bring to the Client's attention defects and deficiencies in the Work and; 3) to determine in general if the Work is being performed in a manner indicating that the Work, when fully completed, will be in accordance with the Contract Documents. However, the Engineer shall not be required to make exhaustive or continuous on-site inspections to check the quality or quantity of the Work. If the Client desires more extensive project observation, the Client shall request that such services be provided by the Engineer as Additional and Supplemental Construction Observation Services in accordance with the terms of this Agreement.

The Engineer shall not be responsible for any acts or omissions of the Contractor, subcontractor, any entity performing any portions of the Work, or any agents or employees of any of them. The Engineer does not guarantee the performance of the

Contractor and shall not be responsible for the Contractor's failure to perform its Work in accordance with the Contract Documents or any applicable laws, codes, rules or regulations.

When municipal review services are included in the Scope of Services, the Engineer (acting on behalf of the municipality), when acting in good faith in the discharge of its duties, shall not thereby render itself liable personally and is, to the maximum extent permitted by law, relieved from all liability for any damage that may accrue to persons or property by reason of any act or omission in the discharge of its duties. Any suit brought against the Engineer which involve the acts or omissions performed by it in the enforcement of any provisions of the Client's rules, regulation and/or ordinance shall be defended by the Client until final termination of the proceedings. The Engineer shall be entitled to all defenses and municipal immunities that are, or would be, available to the Client.

29. Insurance and Indemnification: The Engineer and the Client understand and agree that the Client will contractually require the Contractor to defend and indemnify the Engineer and/or any subconsultants from any claims arising from the Work. The Engineer and the Client further understand and agree that the Client will contractually require the Contractor to procure commercial general liability insurance naming the Engineer as an additional named insured with respect to the work. The Contractor shall provide to the Client certificates of insurance evidencing that the contractually required insurance coverage has been procured. However, the Contractor's failure to provide the Client with the requisite certificates of insurance shall not constitute a waiver of this provision by the Engineer.

The Client and Engineer waive all rights against each other and against the Contractor and consultants, agents and employees of each of them for damages to the extent covered by property insurance during construction. The Client and Engineer each shall require similar waivers from the Contractor, consultants, agents and persons or entities awarded separate contracts administered under the Client's own forces.

30. Hazardous Materials/Pollutants: Unless otherwise provided by this Agreement, the Engineer and Engineer's consultants shall have no responsibility for the discovery, presence, handling, removal or disposal of or exposure of persons to hazardous materials/pollutants in any form at the Project site, including but not limited to mold/mildew, asbestos, asbestos products, polychlorinated biphenyl (PCB) or other toxic/hazardous/pollutant type substances.

Furthermore, Client understands that the presence of mold/mildew and the like are results of prolonged or repeated exposure to moisture and the lack of corrective action. Client also understands that corrective action is a operation, maintenance and repair activity for which the Engineer is not responsible.
